

Human Patient Simulators

- The WELLS Center offers Colorado's widest array of state-of-the-art, computerized mannequins that can simulate virtually any clinical experience.

These lifelike mannequins can be programmed to replicate an almost limitless variety of medical scenarios. One simulator is specially designed to demonstrate pregnancy and childbirth experiences. All the mannequins breathe spontaneously; have palpable pulses, heart and lung sounds; and respond appropriate to stimuli. Each provides detailed recreations of respiratory, cardiovascular and pharmacokinetic systems.

Students can use the human patient simulators at the WELLS Center to build their clinical competencies without risk to patients. Professionals can hone their skills by practicing for unusual scenarios for which they must nevertheless be prepared.
